

Evolution 101

Lesson 20

CODES INFER A DESIGNER

The structure and behavior of matter point to a preexisting, Transcendent Power. The matter of the universe is made of protons, neutrons and electrons. They seem to be like bricks manufactured throughout space on an assembly line. Various combinations of these basic building blocks produce all of the elements, each with its unique structure and properties. One proton plus one electron is the formula or code for hydrogen. Eight protons plus eight neutrons plus eight electrons is the formula or code for oxygen. The ninety-two natural elements are all composed of various combinations of protons, neutrons and electrons.

All elements have unique properties and behavior patterns. The First Law declares atoms and energy can neither create nor destroy the atoms of the universe. As a consequence, atoms cannot explain their own existence or their properties such as gravity, magnetism or chemical properties. Scientists cannot explain why two atoms of hydrogen (a gas) combined with one atom of oxygen (another gas) will result in water (a liquid) or why one atom of sodium (a poisonous metal) combined with one atom of chlorine (a poisonous gas) will produce common, non-poisonous table salt.

LAWS OF THERMODYNAMICS & EVOLUTIONISM

We understand gravity to be a property of matter. We know that two bodies of matter attract each other directly proportionate to the product of their masses and inversely proportionate to the square of the distance between them. Scientists can understand how it works but not why.

The human experience has always identified coding with intelligence. The explanation for the codes must transcend matter/energy. Otherwise, each electron, proton and neutron is endowed with all of the attributes of God. If God is involved, then there can be no evolution since evolution presupposes that God is not involved in solving the question of origins.

Since man has access only to the noncreative processes under the First Law, he cannot solve problems that demand creative process.

RECAP: In addition to the laws of thermodynamics reviewed above, the Law of Cause and Effect, The Law of Biogenesis, The Law of Probability, The Law of Mass Action, The Law of Inertia and the Law of Angular Momentum close the door on the scientific viability of macroevolution. Why, then, do many churches roll over before the soldiers of Satan? Churches should teach more true science along with the Bible. Surely, one must believe that God exists before he can receive salvation.

At this point, Christians object to evolutionists that attempt to critique the Genesis story of a six-day creation while invoking present natural (noncreative) processes. During creation week, God used creative processes and then ceased using them on the seventh day and established the present noncreative processes available for scientists to learn to study.

How can one logically critique creative processes with noncreative tools? Can a person build a house with a broom? Can a blind person describe the Grand Canyon?
